

11141 Cable transition 480 flexible

Concealed in the rebate

Product profile

The flexible cable transition is an easy-to-install, maintenance-free component for the power supply to your door. Installed in the door or window rebate, the power supply is practically invisible and optimally protected from tampering. With the radiussed end pieces included in the set, the cable transition can be used in metal and plastic doors, as well as solid-leaf wooden doors.

Standard version

Installation case:

- Width: 24 mm
- Height: 480 mm
- Depth: 17.5 mm

Coil spring:

- Length: 468 mm
- Inside diameter: 10 mm
- Outside diameter: 13.2

Opening angle up to 180°

Pivot point up to 36mm

Max. Cable diameter: 8mm Radiussed end piece for installation in oblong holes in wooden doors

Scope of supply

Flexible cable transition, including screw set for installation in metal and plastic profiles or solid-leaf wooden doors

Important note

An adequate cable loop must be left at the spiral spring or metal casing. This will ensure that a sufficient length of cable can slide into the cable transition when the door is opened. The cable must not be pinched in the door profile or frame and must be able to slide unimpeded.
