

82190 Parcel box

Letter and parcel package system

Product profile

Our parcel package system makes it possible to securely receive and send goods and packages directly from the building door via letter and parcel package systems. This is practical, because the recipient does not have to receive the package personally and delivery for collection is assured with a secure package system. No prior knowledge is required for operation and the system is suitable for all parcel services.

- Simple operation via direct selection buttons
- Safe storage of packages
- Removal via PIN code or RFID medium
- Sending of packages via logistics service providers
- Notification via email
- Administration via any desired end device
- Remote opening / emergency opening

Standard version

Each user has a permanently assigned compartment Example: Letterbox of the resident. An optimal number of installed package compartments can be assigned dynamically to different users. Once the delivery has been removed from the compartment, package compartments are free for use by other users. Multiple compartments can be assigned to individual users. Upon removal of the contents, all assigned compartments open automatically.

- Direct selection button, illuminated

- Identification with PIN code or RFID medium
- Optical and acoustic signalling
- Status monitoring and email notifications
- User administration and monitoring via web browser
- 12 - 24VDC, typ. 8W standby, 20W compartment opening

Cutout

- Free number of statically assigned letterboxes
