

## 12100 P

### Full-leaf strike box

#### Product profile

For double leaf panic doors in conjunction with mortice locks 12402/12412/12500. After the panic function has been activated, i.e. the inactive leaf has been opened via the panic exit fitting, the inactive leaf automatically locks again via the switch lock. When the door is open, the panic lever handle is spring-loaded.

For use in commercial buildings (administrative buildings, nursing homes) or extension doors in schools and hotels.

- Configurable strike box in three backsets, without forend
- Centred lock case for screwed forends
- No drooping lever handles on open doors (active lever handle upholding)
- Clamp follower 9 mm
- 2–5 mm rebate gap bridging
- Locking bars secured against recoil
- Follower turning angle 35°

#### Standards

- EN1125, with Glutz 8615
- ECO EPN900 IV
- EPN2000 II / III

#### Important note

The forend (12110.1 flat forend, 12110.2 lip forend or 12110.3 angled forend) must be ordered separately.

Only locking rods with a diameter of 10 mm may be used.
