

## 53021

### User closable window handle

#### Product profile

As a user closable window handle this model offers effective protection against opening windows and French windows unauthorizedly. Little children or disorientated people cannot open or block improperly the window, for example.

Function: Conventionally lockable window handles prevent a turning the handle over shutdowns in the handle or in the turn. User closable window handles have a free rotatable 90 degree stop without effect on the square spindle or the window mechanics. Only at a simultaneous activity of pushbutton and window handle an adjustment of the window mechanics and therefore an opening are possible.
